

2023

Chemistry

B.Sc. III Semester End Examination - 2023

PAPER - CC-7T

Full Marks : 40

Time : 2 hours

*The figures in the right-hand margin indicate marks.
Candidates are required to give their answers in their own
words as far as practicable.
Illustrate the answers wherever necessary.*

Group - A

1. Answer any five questions : 5×2=10

(a) Predict the product of the following reaction and give plausible mechanism.

(b) What do you mean by atropisomerism? Give example.

(Turn Over)

(2)

(c) Write down the product with stereo chemistry.

(d) Convert :

(e) Draw the energy profile diagram of an exothermic reaction shown below.

(f) Write down the product with plausible mechanism.

(g) Draw the (-) sc and (+) ap conformation of active butane-2,3-di-ol.

(h) Write down the product with mechanism.

(3)

Group - B

Answer any four from the following :

4×5=20

2. (a) Addition of HBr to 1,3-butadiene yield two product and the product composition depends on temp. Write the products and explain with the help of energy profile diagram. 3

(b) Write down the product of the following reaction with mechanism. 2

3. (a) Explain the Hammond's postulate with a suitable example. 3

(b) Which of the following pairs has greater enot content in gas phase and why (any one) 2

(4)

4. Convert :

(a) But-2-yne \rightarrow (\pm)-2,3-Butane diol

(b) Predict the product with mechanism. $2\frac{1}{2}+2\frac{1}{2}$

5. (a) Outline a general mechanism for radical addition of HBr to $\text{CH}_3\text{CH}=\text{CH}_2$. Why peroxide effect is only observed in case of HBr and not in case of HCl or HI.

3

(b) Assign pro-R/ pro-S or pro-E/pro-Z of the marked homomorphous ligand (any two) 2

6. (a) Give the structures of all possible alkenes formed when compound 1 is heated Rank these products in the increasing order of their relative amounts produced.

(5)

(b) Arrange the following compounds in increasing order of basicity. Justify your answer.

7. (a) Predict the product (major) of the following reaction and Explain. $2\frac{1}{2}$

2-tert-butyl-3, 3-dimethyl-1-butane

(b) Predict the product with mechanism. $2\frac{1}{2}$

Group - C

Answer any one from the following. $10 \times 1 = 10$

8. (a) Ozonolysis reaction passes through a zwitter ion and carbonyl intermediate. -Explain.

Give evidence in faour of the mechanism. 2

(6)

- (b) What are carbenes? What happens when diazomethane is protolyzed and the product is allowed to react with allene? 3
- (c) Assign R_a/S_a naming of the following. 1½+1½

- (d) What is buttressing effect? Explain with proper example. 2

9. (a) Draw the torsion angle energy profile diagram of n-butyl chloride for c₁-c₂ and c₂-c₃ bond rotation. 3
- (b) Explain this result with mechanism. 2

- (c) Transform the following with suitable reagent and show

(7)

the mechanism.

1½+1½

- (d) Which of the following compounds is resolvable at room temp and why? 2
